IT 112 WEB SYSTEMS AND TECHNOLOGIES

WEEK 7

A screenshot of a web browser displaying a Pokémon-themed web application. The browser's address bar shows the file path: C:/Users/TUF%20F15/OneDrive/Desktop/WEEK7_MINIFULLSTACKSTARTER/public/index.html. The page has a red header with the text "IT112 Week 7 - Trainer List". The main content area is divided into two sections. On the left, under the heading "PROVIDE THE TRAINER'S NAME", there are three input fields: "Name" (with a placeholder "e.g. Ash Ketchum"), "Email" (with a placeholder "ash@pallettown.com"), and "Age (optional)". Below these fields is a red button labeled "Join The Adventure!". On the right, there is a section titled "ACTIVE TRAINERS" with a large, empty rectangular box below it. The browser's taskbar at the bottom shows various icons, including the Start button, Search, and several application icons. The system tray on the right indicates the temperature is 30°C, the weather is "Mostly cloudy", and the time is 3:01 PM on 3/24/2026.

Reflection:

In Week 7, I learned how to create a simple web application with a Pokémon-themed interface. I understood how CRUD operations work, especially in adding and displaying trainer data dynamically on the page. One challenge I encountered was organizing my project files properly, since I accidentally misplaced some folders and important files. I solved this by fixing my folder structure and carefully reviewing my code until everything worked correctly. One improvement I made was designing the interface into a Pokémon Trainer Card style to make the project more interactive and visually appealing.
